>>> Selection of Mount panel <<<

A mount panel is optional. Please select T-type or F-type depending on the size and design of each customer's steering. Please confirm S series All-in-one model's dimension and shape as below. Be careful of sensors' jacks and battery pack in the back of the unit.

F-type mount panel

Possible to install by using a bolt that fixes a steering on a steering post.

T-type mount panel

Possible to install by using a hole or slit of steering spoke. By reversing the panel's up and down, 4-step positions adjustment is possible per 6 mm.
